

HLS-10

# 机械故障听诊器

*HLS-10 is used to check the vibrating condition in machines. It can pick up and amplify the weak audio signals via a sensitive piezoelectric sensor, and distinguish the normal / abnormal signal and its location. It is suitable for diagnosing various internal disorders of any rotated mechanics.*

**能** 检测机械内部振动情况。通过高灵敏压电式传感器，拾取微弱的音频信号并进行放大，从而分辨出正常 / 异常的信号及其所在部位。通用性强，适用于任何旋转机械的故障诊断。
